

The background of the entire page is a collage of irregular, torn-edge shapes in various shades of blue and green, resembling watercolor or stained paper. These shapes are scattered across the white background, creating a textured, artistic frame around the central text.

LYRICSENSE

By: Charles Keely, Daniel Busch, Gabe Vitti, Lydia Clark,
Natalie Feng, and Maxwell Buchalski

Project Description

- Vision
 - For music listeners who want to develop a stronger connection with their favorite artists.
- Problem:
 - Music listeners want to know the deeper meaning behind songs that they love, and want to be able to share those meanings with their friends
- Solution:
 - LyricSense is a website created to be able to address this problem through user creating accounts and searching for songs. It provides the lyrics and real-time chat gpt interpretations of these lyrics, while also allowing users to share with friends, view past searches, and explore song's backgrounds
- LyricSense is a great way to learn more about your favorite songs. Whether its about what the lyrics mean or the context of the song

	Title	Artist	Album
	The Weekend	SZA	Ctrl
	The Hills	The Weeknd	Beauty Behind The Madness
	The Weekend	SZA	Ctrl (Deluxe)
	Blinding Lights	The Weeknd	After Hours
	Die For You	The Weeknd	Starboy
	Earned It (Fifty Shades Of Grey)	The Weeknd	Beauty Behind The Madness

The Hills

The Weeknd

Beauty Behind The Madness

The Weeknd

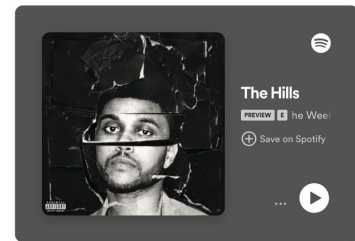

Beauty Behind The Madness

Background

Yeah

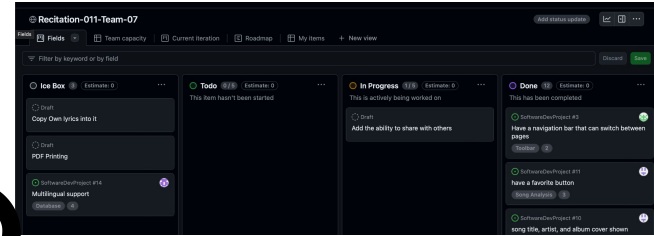

Yeah

The repetition of "Yeah" in these lyrics emphasizes agreement or affirmation, often used to enhance the

Tools Used

- Project tracker
 - Github project board - to track project progress and who's doing what
 - 1 star
- VCS Repository
 - Github - to have a remote repository
 - 4 stars
- Database
 - PostgreSQL - in order to create our user db
 - 5 stars
- IDE
 - VSCode - used as a coding environment for writing the website
 - 5 stars
- UI Tools
 - HTML and Handlebars - to add to our website in terms of templating and basic structure
 - Both 5 stars

Tools Used

- Application Server
 - NodeJS - used it to build our website faster and using server-side application
 - 4.5 stars
- Deployment environment
 - Google Chrome - to run our application on the web and test to make sure it works
 - 5 stars
- External API's
 - Spotify, ChatGPT, and Lyric Sense - all allow for us to interact with third-party data
 - All 5 stars
- Framework
 - Node.js - help build a scalable website
 - 5 stars

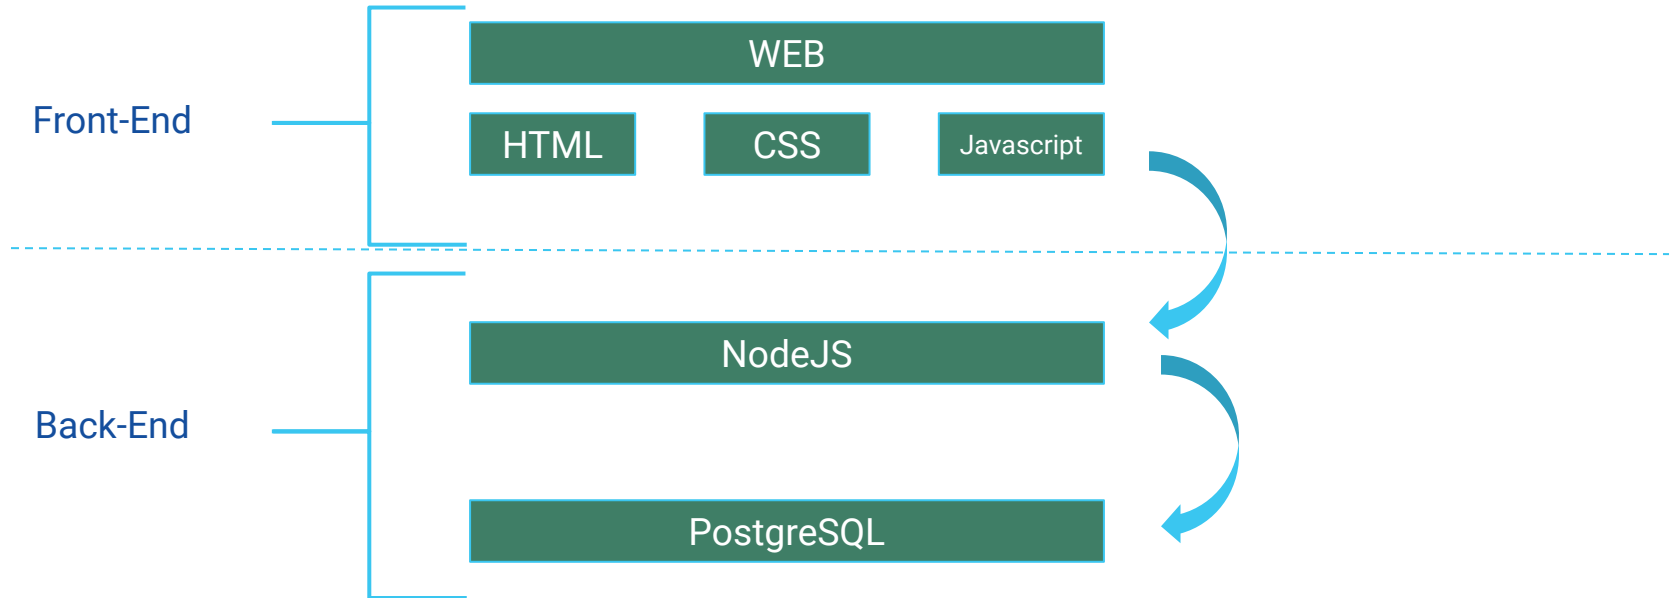

Project Management

- Used the project tracker on Github to manage tasks and where they are
- Meet with the TA at 2:20 on Mondays
- Meet once or twice a week as a team to discuss updates
- Used Discord in order to communicate
- Used an Agile approach for our team
 - Utilizing sprints
 - Can easily adjust to problems and change

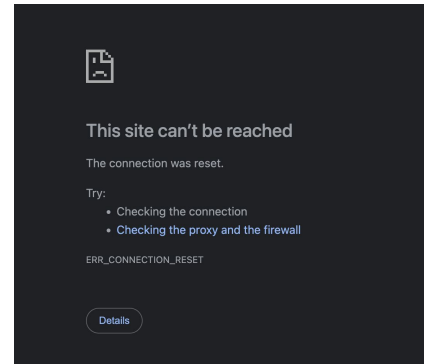

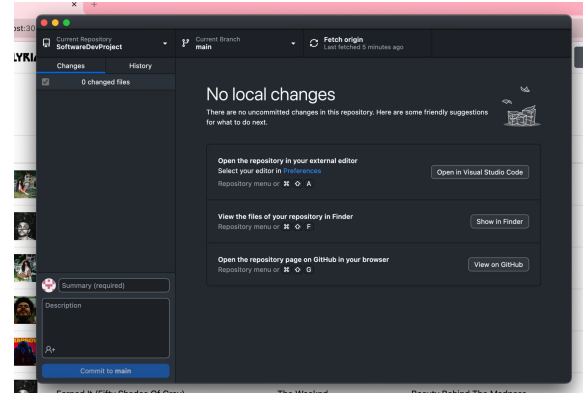

Architecture Diagram

Challenges

- Which API to use for our lyrics for a given song
 - Found lyric sense
- Had lots of issues with git (in terms of bugs getting pushed and lots of rebase/merge conflicts)
 - Everyone in the group downloaded github desktop, which helped a lot with how to make sure branches were up to date
- Throughout the project had issues with docker because of our env file
 - Once the env file was fixed had to distribute it individually in order to run docker
- Had lots of little bugs here and there for different pages and buttons
 - Spent time working with one another, learning on our own, and attending office hours

Future Scope/Enhancements

1. Being able to copy own lyrics
2. Printing out the interpretations in PDF or word format
3. Allow for the website to be multilingual
4. Add a feature to add the interpretations to the users social media accounts

By adding these things to our project we would expect that it would increase the amount of things user's would want to do and use our website for, while also allowing them to share with others.

Project Demo!
